

Jonish Prajapati | Fort Worth, TX

+1 817-345-3644 | Jonishprajapati6@gmail.com | [LinkedIn](#)

- Software Engineer with 7+ years of experience designing, developing, testing, troubleshooting, and supporting enterprise applications using Java 17/21, Spring Boot, Microservices, REST APIs, and React/Angular.
- Strong experience designing scalable backend services and event-driven architectures using Apache Kafka and RabbitMQ, supporting asynchronous and high-volume transaction processing.
- Hands-on experience building modern frontend applications using **React, Angular, TypeScript, and JavaScript**, integrating UI workflows with Spring Boot REST and GraphQL APIs.
- Experienced in deploying containerized microservices using Docker and Kubernetes **and building scalable cloud-native applications using AWS** and API-driven integrations.
- Strong background in high availability, fault tolerance, production troubleshooting, incident management, logging, monitoring, and alerting using Splunk, Grafana, Prometheus, and CloudWatch.
- Experienced with automated testing using JUnit 5 and Mockito and CI/CD pipelines using Jenkins, Maven, Git, Docker, and Kubernetes.

Technical Skills:

Programming Languages	Java (17/21), JavaScript, TypeScript, Python, SQL
Backend Frameworks	Spring Boot, Spring MVC, Spring Security, Spring Cloud, Spring Data JPA, Hibernate, Microservices, RESTful APIs, GraphQL, Apache Kafka, RabbitMQ, JMS, Event-Driven Architecture, Spring Batch, Temporal
Frontend Technologies	React.js, Redux Toolkit, React Router, Angular, RxJS, HTML5, CSS3, Bootstrap, Material UI
Cloud Platforms	AWS (EC2, ECS, EKS, S3, RDS, Lambda, DynamoDB, Secrets Manager, SQS, SNS, IAM, CloudWatch), GCP, Azure
CI/CD & DevOps Tools	Jenkins, Maven, Git, CI/CD Pipelines, Docker, Kubernetes, AWS EKS, SonarQube, Nexus
Monitoring & Logging	Splunk, Grafana, Prometheus, Log4J, CloudWatch, Slf4j
Databases	Oracle, Postgresql, MySQL, MongoDB, Cassandra, DynamoDB, Elasticsearch
Testing Tools	JUnit 5, Mockito, TestNG, Cucumber, Selenium, SonarQube, Splunk, Grafana, Prometheus, ELK Stack, SLF4j, Log4j
Methodologies	Swagger/OpenAPI, JIRA, Confluence, Agile Scrum, SDLC, TDD

Professional Experience:

Western Union | Plano TX | Software Engineer | August 2024 - Current

- Participated in all phases of the Software Development Life Cycle (SDLC) including requirement gathering, system analysis, design, development, testing, deployment, and production support.

- Designed and developed a payment onboarding and transaction-processing workflow using Java 21, Spring Boot, REST APIs, Kafka, and Temporal, validating customer/payment information and coordinating downstream processing across distributed microservices.
- Built RESTful APIs for transaction orchestration and downstream enterprise integrations, implementing request validation, exception handling, retry mechanisms, and secure service-to-service communication.
- Leveraged ChatGPT and GitHub Copilot for code reviews, debugging, test generation, technical documentation, and improving development productivity.
- Implemented event-driven processing using **Apache Kafka**, developing producers and consumers for asynchronous transaction events and improving reliability through retry and error-handling mechanisms.
- Designed and developed scalable backend services using Java and Spring Boot, implementing REST APIs to support distributed microservices architectures.
- Developed Temporal Workflows and Activities to manage complex onboarding, transaction processing, and asynchronous business operations with built-in retries and state persistence.
- Implemented Spring Security and OAuth-based authentication mechanisms, enforcing secure access control and protecting enterprise applications from vulnerabilities.
- Experience with Spring Cloud components for service discovery, configuration management, and inter-service communication in distributed microservices architectures.
- Integrated Temporal workflows with Spring Boot microservices, enabling seamless orchestration across multiple services and improving system scalability.
- Optimized performance by tuning Temporal task queues, worker configurations, and Kafka consumer throughput, supporting high-volume, low-latency processing.
- Performed peer code reviews and security analysis, ensuring adherence to secure coding practices, architectural standards, and high-quality software delivery.
- Developed responsive enterprise UI components using React with TypeScript, building reusable components, forms, transaction screens, and API-driven workflows integrated with Java/Spring Boot microservices.
- Integrated React frontend applications with REST and GraphQL APIs, implementing client-side validation, error handling, loading states, and efficient data exchange for transaction-processing workflows.
- Designed and implemented GraphQL APIs to optimize client-server interactions, reduce over-fetching of data, and improve application responsiveness.
- Developed and maintained batch-processing applications using Java, Spring Boot, and Spring Batch for high-volume transaction processing.
- Implemented Jobs, Steps, Readers, Processors, and Writers, including retry, error handling, transaction management, and restart capabilities.
- Developed unit and integration tests using JUnit 5 and Mockito, validating service-layer business logic, REST API workflows, exception scenarios, and Kafka-based processing before deployment.
- Optimized batch workloads using chunk-based processing and parallel processing for better performance.
- Built Kafka producers and consumers for real-time transaction events, implementing asynchronous processing, consumer configuration, retry/error handling, and service decoupling across distributed Spring Boot microservices.
- Containerized Spring Boot services using Docker and deployed them to Kubernetes, supporting horizontal scaling, high availability, fault tolerance, and resilient production deployments.
- Built and supported automated CI/CD pipelines using Jenkins, Maven, Git, Docker, and Kubernetes, automating application builds, unit testing, code-quality checks, container packaging, and deployments across environments.
- Worked with AWS cloud services including EC2, S3, RDS, IAM, CloudWatch, and API-based integrations, supporting scalable and highly available Spring Boot applications in cloud environments.

- Monitored production microservices using Grafana and Splunk, creating dashboards and alerts to track application health, API latency, error rates, Kafka processing, and system performance, and performed root-cause analysis during production incidents.
- Utilized Unix/Linux command-line tools and Bash scripting for automation, system monitoring, log analysis, and troubleshooting application and infrastructure issues.
- Migrated legacy monolithic applications into modern microservices-based architectures, improving scalability, modularity, and maintainability.
- Collaborated with cross-functional teams including DevOps, QA, and product teams, ensuring smooth integration, testing, and deployment of enterprise solutions.
- Resolved production incidents and performance bottlenecks, implementing remediation frameworks and stability improvements to enhance system reliability.

Environments: Java 21, Spring Boot, Temporal (Java SDK), Spring Security, Spring Batch, Batch Processing, OAuth, REST, GraphQL, Kafka, Angular, Typescript, Docker, Kubernetes, AWS (EC2, S3, RDS), Jenkins, Maven, Git, CI/CD, Splunk, Grafana, Unix, Bash/Shell Scripting, Microservices, Agile/SCRUM.

NIC Asia Bank | Kathmandu Nepal | Software Engineer | June 2022 - December 2023

- Collaborated with product owners, architects, and cross-functional Agile teams to analyze business requirements, design scalable solutions, estimate user stories, and deliver enterprise applications through iterative Scrum sprints.
- Designed and developed Java Spring Boot microservices using layered architecture (Controller-Service-Repository), implementing dependency injection, transaction management, exception handling, service discovery, and resilient REST-based communication.
- Built secure RESTful APIs with Spring Boot, implementing request validation, OAuth2/JWT authentication, Swagger/Open API documentation, standardized error handling, and API versioning for enterprise integrations.
- Developed scheduled batch processes using Spring Batch for processing banking and transaction data from relational databases and APIs.
- Implemented validation, exception handling, and database updates for reliable batch-processing workflows.
- Developed modern React.js applications using Functional Components, Hooks, Context API, Redux Toolkit, React Router, Axios, and TypeScript, building reusable UI components, dashboards, workflow screens, and dynamic forms integrated with backend microservices.
- Designed event-driven microservices using Apache Kafka and RabbitMQ, implementing producers, consumers, consumer groups, retry mechanisms, DLQs, and asynchronous messaging to improve scalability, reliability, and loosely coupled service communication.
- Optimized backend services using Java 8 features including Streams API, Lambda Expressions, Functional Interfaces, CompletableFuture, and multithreading, improving concurrent request processing and reducing API response latency.
- Designed efficient persistence layers using Hibernate ORM, optimizing Oracle and SQL Server queries, indexing strategies, caching, connection pooling, and transaction management for high-volume transactional workloads.
- Provisioned and managed AWS infrastructure using Terraform, deploying applications on EC2, ECS, EKS, Lambda, S3, RDS, DynamoDB, SQS, SNS, IAM, and CloudWatch, enabling scalable cloud-native deployments and Infrastructure as Code (IaC).
- Containerized applications using Docker and orchestrated deployments on Amazon EKS, configuring Deployments, Services, Ingress Controllers, ConfigMaps, Secrets, Horizontal Pod Autoscalers (HPA), rolling deployments, and zero-downtime release strategies.

- Implemented automated CI/CD pipelines using Jenkins, GitHub, Maven, SonarQube, JaCoCo, and Docker, enabling continuous integration, automated testing, static code analysis, artifact management, and production deployments.
- Built fault-tolerant Spring Batch ETL workflows with chunk processing, retry policies, skip logic, and error handling while integrating Elasticsearch to support enterprise search, analytics, and reporting capabilities.
- Implemented centralized logging and observability using Splunk, ELK Stack, Log4j, and CloudWatch, performing root-cause analysis, JVM tuning, memory leak detection, Kafka troubleshooting, and performance optimization across distributed microservices.
- Developed comprehensive JUnit 5, Mockito, Cucumber, TestNG, and Selenium test suites following TDD principles, integrating automated testing into CI/CD pipelines to maintain high code quality and deployment confidence.

Environment: Java, Spring Boot, Spring MVC, Spring Security, Spring Cloud, Spring Batch, Chunk Processing, Hibernate, JPA, Microservices, REST, React.js, Redux, HTML5, CSS3, JavaScript, Kafka, OAuth2, JWT, Oracle, Elasticsearch, Docker, Kubernetes (EKS), AWS Terraform, Jenkins, Maven, Git, JUnit 5, Mockito, Selenium, SonarQube, Splunk, Log4j, JIRA, Confluence, Agile Scrum.

Yeti Tech | Kathmandu Nepal | Software Engineer | May 2019 - May 2022

- Provided 24/7 production support for enterprise Java applications, proactively monitoring system health, identifying performance bottlenecks, and ensuring high system availability.
- Diagnosed and resolved critical production incidents, performing root cause analysis (RCA) and implementing long-term fixes to prevent recurrence.
- Monitored and supported Java microservices and Angular-based web applications, ensuring seamless integration between frontend UI components and backend services.
- Monitored customer-facing production applications, investigated failed transactions and user-reported issues, performed root cause analysis, and implemented fixes to improve application reliability and customer experience.
- Investigated and resolved application errors, memory leaks, and thread contention issues using JVM monitoring tools, log analysis, and debugging techniques.
- Supported Angular front-end applications, resolving UI defects, optimizing page performance, and improving API integration stability.
- Supported and monitored scheduled batch-processing jobs, troubleshooting failures, analyzing logs, and performing root-cause analysis in production.
- Managed and monitored event-driven messaging systems using RabbitMQ, ensuring reliable event processing and service communication.
- Performed application deployments, patch releases, and hotfix rollouts through CI/CD pipelines, ensuring minimal downtime and controlled production releases.
- Analyzed application logs and monitoring dashboards using Splunk and Grafana, identifying anomalies, performance degradation, and system failures.
- Developed Java-based utilities and automation scripts to support operational tasks such as log parsing, data validation, batch job monitoring, and system health checks.
- Supported database troubleshooting and performance tuning, analyzing SQL queries and resolving data inconsistencies across production environments.
- Assisted in environment management across development, QA, and production environments, ensuring configuration consistency and system reliability.
- Worked closely with DevOps, QA, and infrastructure teams to resolve deployment failures, environment issues, and application performance concerns.

- Implemented operational improvements and enhanced monitoring strategies, reducing incident response time and improving system observability.
- Participated in on-call rotations and incident management processes, ensuring timely resolution of high-priority production issues.
- Supported cloud-based deployments on Google Cloud Platform (GCP), working with services such as Compute Engine and Cloud Storage for application hosting and data management.
- Assisted in monitoring and troubleshooting applications running on GCP infrastructure, using logging and monitoring tools to maintain performance and reliability.

Environments: Java, Spring Boot, Spring Security, Angular, REST, GraphQL, Microservices, RabbitMQ, GCP (Compute Engine, Cloud Storage), Docker, Kubernetes, Jenkins, Maven, Git, CI/CD, Splunk, Grafana, Unix/Linux, Bash, SQL, Oracle, MySQL, MongoDB, Agile/SCRUM, Production Support, Incident Management.

Education:

Master's in Business Analytics and Management - Avila University

Bachelor in Computer Science - The British College
